PROFILE

Web developer with hands-on experience designing and building full-stack web applications end to end, not just coursework. I have planned, designed, coded and tested a complete community finance system, an authenticated REST API, and a working chatbot. Seeking an intern or junior role where I can own features, work on a real codebase from day one, and grow with senior code review.

TECHNICAL SKILLS

Languages	JavaScript, PHP, Python, Java (OOP coursework), C++
Frontend	HTML, CSS, React, Tailwind CSS
Backend	Node.js, Express.js, Flask, PHP; JWT authentication, bcrypt password hashing
Databases	MySQL, MariaDB, SQL, relational database design
Tools & Concepts	Git, GitHub, XAMPP, JSON, REST APIs

EDUCATION

Bachelor of Science in Computer Science (BSCS) — University of Poonch, Rawalakot, AJK | Oct 2022 – expected 2026, currently enrolled

PROJECTS

Community Savings & Micro-Loan Management System — Final Year Project | PHP, MySQL/MariaDB, JavaScript, HTML/CSS, Chart.js

- Planned, designed and implemented the system end to end: requirements, a 17-table relational database, roles for Super Admin, Category Admin and Member, and the full contribution, fund and loan workflows.
- Contributions and funds: members contribute to a central fund or a specific project, with verification rules including blocking self-verification. Balances are recomputed from verified records only, central funds are kept separate from project funds, and outstanding loan principal is not counted as available cash.
- Fund allocation and settlement: Super Admin allocates central funds to projects only after an availability and locking check, and projects can be settled with surplus transferred back, so the ledger stays consistent.
- Micro-loans: application, guarantor acceptance, admin evaluation, approval, disbursement to a repaying loan, instalments and repayments through to completion, plus a transparent rule-based credibility score to support — not replace — admin judgement.
- Security and reporting: role-based access, prepared statements, CSRF, bcrypt and hashed OTP tokens, with dashboards and charts.

Todo API — Authenticated REST API | Node.js, Express 5, MySQL (mysql2 pool), JWT, bcrypt, HTML/JavaScript

- Built an authenticated, multi-user Todo API with a browser interface served by Express. Users register and log in with bcrypt-hashed passwords and 1-hour JWT Bearer tokens; every task query is isolated by the logged-in user.
- Full task CRUD — list tasks, add a task, mark a task done or not done, and delete a task — with hand-written validation, parameterised SQL queries and structured 400, 401, 404 and 500 responses.
- Environment-variable config for the database and JWT secret, with a connection pool and schema file for fresh setup.

Village Fund Management FAQ Chatbot | Python, Flask, RapidFuzz, JavaScript, JSON

FAQ chatbot matching questions to predefined answers with fuzzy string matching, via Flask. github.com/farazkhanpasha/chatbot-for-villagef-fund-managment-web-usage

Bike Fuel Monitor — Backend Prototype | PHP, MySQL

Backend prototype for fuel readings and low-fuel alerts, tested with simulated readings; sensor integration incomplete. github.com/farazkhanpasha/bike-fuel-monitor
